No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 33,

Application US/08619491

Patent No. 6210670

GENERAL INFORMATION:

PAPPLICANT: BEST9, Ellen L.

TITLE OF INVENTION: Specific for E-Selectin and P-Selectin

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSEE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Center, Eighth Floor

CITY: San Francisco

STATE: California

COUNTY: 10.5A
                                                                                                                                                      ö

```
The present invention describes an isolated antibody, or an antigen-
binding antibody fragment (1), that preferentially binds cell-associated
CA 125/0772P polypeptide relative to shed CA 125/0772 polypeptide. Also
cascribed: (1) a monoclonal antibody (II) produced by hybridoma 4E7; (2)
a monoclonal antibody that competes with binding of (II); (3) a hybridoma
CC amposited in (II); (4) an isolated nucleic acid molecule (III)
comprising a nucleotide sequence that encodes a variable chain region of
C(1); (5) a pharmaceutical composition comprising an antibody or an
antigen-binding antibody fragment that preferentially binds cell-
associated CA 125/0772P polypeptide relative to shed CA 125/0772P
C(1); (5) a pharmaceutical composition comprising a
monoclonal antibody or an antigen-binding monoclonal antibody fragment
CC that preferentially binds cell-associated CA 125/0772P polypeptide, and a carrier; (7) an article
CM manufacture (IV) comprising packaging material and a composition
CC of manufacture (IV) comprising packaging material and a composition
CC comprising an antibody, or an antigen-binding antibody fragment that
CC comprising an antigen-binding antibody fragment that
CC composition in a form suitable for administration to a subject; (8) a
C125/0772P relative to shed CA 125/0772P pelative to shed CA
CC composition in a form suitable for administration to a subject; (8) a
C125/0772P relative to shed CA 125/0772P operably linked to a heterologous
CC composition in a form suitable for administration to a subject; (8) a
C125/0772P relative to shed CA 125/0772P operably linked to a heterologous
CC 2125/0772P relative to shed CA 125/0772P relative to shed CA
CC 125/0772P relative to shed CA 125/0772P operably linked to a heterologous

antibody fragment; (11) an antibody or antigen binding antibody fragment; that competes with (11), and (12) a pharmaceutical composition comprising (VI) and a carrier. (1) has cytostatic activity, and can be used as an immunostimulant and a mediator of lysis of positive tumour cell. (1) is useful for ameliorating a symptom of a CA 125/O7P-related disorder which is a cell proliferative disorder such as cancer, cervical or uterine cancer, breast or lung cancer or ovarian cancer. (V) is useful diagnostically for monitoring the development or progression of cancer or tumour as part of clinical testing procedure. The present sequence represents an antibody light chain variable region amino acid sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                         This sequence is from the light chain variable region of an anti-IL2R alpha monoclonal antibody. The antibody is only weakly inhibitory on its own. When anti-IL2R alpha antibodies which are strongly inhibitory on their own are used with anti-CD4 antibodies which are also strongly inhibitory, their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response. No such synergistic effect is observed with the weakly inhibitory MAD M-215. See AAQ36607-Q36616. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PN

                                                                                                                           The sequence is that of the interleukin-2 (IL-2) chimeric antibody light chain, coded by clone 215. Antibodies against IL-2 receptors are useful as immunosuppressants, and are much less immunosuppressants are useful antibodies. See also ARMIS321-RIS326. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 24-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                      ö
                                                                                                                     The present invention relates to a chimeric protein having a Flt3 ligand (FL) or its biologically active fragment and a proteinuous or peptidyl tumoricidal agent. The invention is useful for treating malignancy, neoplasm e.g. melanoma, breast cancer, hepatocellular carcinoma and as a vaccine for eliciting an immune response. The invention is also useful in gene therapy. The present sequence is the 2B8 light chain variable region
                                                                                                                                                                                                                                                                                                       PGSSPKPWIYGTSTLASGVPTRFSGSGSGTSYSLTISRVEAEDAATYYCQQWSSNPFTFG 120

                                                                                                                                                                                                                       This invention relates to a novel chimeric protein comprising an Flt3 ligand, or its biological fragment, and a proteinuous or peptidyl tumoricidal agent. The invention may be useful for the production of compounds with a cytostatic activity or a vaccine. The composition and methods are useful for preventing or treating neoplastic conditions, such as melanoma, breast cancer or hepatocellular carcinoma. The present sequence is that of a protein which is related to the chimeric proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody engineering; chimeric antibody; cytostatic; gene therapy; vaccine; gastrointeetinal disease; immune response; melanoma; malignancy; breast cancer; hepatocellular carcinoma.

                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                    The present invention relates to a chimeric protein having a Flt3 ligand (FL) or its biologically active fragment and a proteinuous or peptidyl tumoricidal agent. The invention is useful for treating malignancy, neoplasm e.g. melanoma, breast cancer, hepatocellular carcinoma and as a vaccine for eliciting an immune response. The invention is also useful in gene therapy. The present sequence is the anti-CD20 chimeric antibody

This invention relates to a novel chimeric protein comprising an Flt3 ligand, or its biological fragment, and a proteinuous or peptidyl tumoricidal agent. The invention may be useful for the production of compounds with a cytostatic activity or a vaccine. The composition and methods are useful for preventing or treating neoplastic conditions, such as melanoma, breast cancer or hepatocellular carcinoma. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a cell-free, in vitro method of remodeling a peptide. The method involves removing a saccharyl subunit from the peptide, thus forming a truncated glycan, and contacting the truncated glycan with at least one glycosyltransferase and at least one glycosyl anor under conditions suitable to transfer at least one glycosyl donor

to the truncated glycan, thus remodeling the peptide. Conjugates can be formed between a granulocyte colony stimulating factor (G-CSF) peptide, interferon alpha peptide, interferon beta peptide, erythropoieth cator interferon alpha peptide, follicle stimulating hormone peptide, erythropoieth (EPO) peptide, granulocyte macrophage colony stimulating factor (GM-CSF) peptide, interferon-gamma peptide, tissue plasminogen activator (GM-CSF) peptide, interferon-gamma peptide, tissue plasminogen activator (TPA) peptide, interleukin-2 (IL-2) peptide, factor VIII peptide, TNFalpha receptor/immunoglobulin (IS) G fusion peptide, urokinase peptide, anti-corporate in ID/IIIa moncolonal antibody peptide, chimeric anti HER2 antibody peptide, recombinant DNase peptide, chimeric anti-HER2 consulin peptide, hepatitis B surface antigen (HGBA), human growth hormone (HGH) peptide, and a modifying group, where the modifying group is covalently attached to the peptide through an intact glycosyl linking group. The method is useful for a cell-free, in vitro method of remodeling the above mentioned peptides. The present sequence represents the murine anti-CD20 antibody light chain mature variable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 PGSSPREWIYATSNLASGVPVRFSGSGSGTSYSLTISRVEAEDAATYYCQQWTSNPPTFG 120

                         Treating B cell lymphoma in humans, comprises administering immunologically active, chimeric anti-CD20 antibodies and/or radiolabeled anti-CD20 antibodies to the human.
                                                                                                                                                                                                                                                                                                                                                                                                                       PGSSPKPWIYGTSTLASGVPTRFSGSGTSYSLTISRVEAEDAATYYCQQWSSNPFTFG 120
                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                           The present invention relates to a method for treating B cell lymphoma. The method comprises administering at a first administration period, an immunologically active, mouse/human chimeric anti-CD20 antibody and/or administering, at a second administration period, a radiolabelled anti-CD20 antibody, to the human subject. The invention also discloses expression vectors that may be used in the method of the present invention. The method is useful for treating B cell lymphoma in humans. The present sequence represents murine anti-CD20 antibody light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antibody binding to CD20 and having Pc-bound sugar chains of low fucose content for treatment of cancer and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                MDFQVQIISFLLISASVIMSRGQIVLSQSPAILSASPGEKVTWTCRASSSVSYIHWFQQK

The invention relates to cells producing an antibody molecule specifically binding to CD20 are new, in which the antibody contains Neglecifically binding to CD20 are new, in which the antibody contains Neglecoside bond complex sugar chains bonded to the Region of the antibody peptide chains, of which less than 20% have a fucose residue bonded to the Neacetylgiucosamine residue at the reducing end of the sugar chain. The cells are used in the treatment and prevention of cancer and immune disorders. This sequence corresponds to a protein used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an improved method for treating B cell lymphoma comprising administering an anti-CD20 antibody. The improvement comprises administering at least one chemotherapeutic agent. The antibody causes a substantial depletion of peripheral B cells. The antibody is chimeric anti-CD20 or C2B8. The method is useful for treating B cell lymphoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to cells with modified sugar chain modifying enzyme activity. The enzyme activity of binding the l-position of fucose to the 6-position of an N-acetylglucosamine at the reducing end of a complex N-glycoside linked sugar chain via an alpha-bond is absent or less than in the parent cell. The sugar chain modifying enzyme is preferably alpha 1,6-fucosyltransferase (ADE73052-ADE73053 and ADE73055-ADE73066). The invention is useful for the treatment and prevention of tumours, allergy, inflammation, autoimmune disease, circulatory disparance was used in an example from the invention. The present sequence was

The invention relates to a drug containing as the active ingredient, an antibody composition produced by cells tolerant to a lectin recognising a sugar-chain structure in which an alpha-bond is formed between the 6-position of N-acetylglucosamine at the reducing end of an N-glycoside bond-type complex sugar chain and the 1-position of fucose. The drugs are useful in screening and treating patients not suitable for drugs not preventives or remedies for diseases accompanying tumour, allersy or inflammation, autonmence diseases, diseases of the circulatory system, and viral or bacterial infections. In a method from the invention, a CCR4 gene was used for constructing a vector (CAG-CCR4/pcDNAs) for producing a transformant EL-4 cell (ATC TEB-39) to express chimeric CCR4. Antibody-dependent cytotoxicity of the thus produced antibody composition was confirmed. The current sequence represents a protein related to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                remodelling and glycoconjugation of these naturally occurring peptides thereof. Specifically, each BPO peptide comprises one or more glycans and has a glycoconjugate molecule such as polyethylene glycol (PEG) attached to it. Accordingly, the present invention provides glycobEGylated BPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            peptides that have either monoantennary, biantennary or triantennary peptides that have either monoantennary, biantennary or triantennary glycans covalently attached thereto. As such, these peptides are useful for the treatment of anaemia, and hence exhibit antianaemic activities working to increase haematocrit levels in mammals, in particular in humans i.e. increasing the relative volume of blood occupied by erythrocytes. Furthermore, EPO therapy can be used to treat kidney dialysis patients. This polypeptide is a human protein sequence related to the field of haematology, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                    9

peptide comprising poly(ethylene glycol). (MI) is useful for remodeling protein to generate glycopeptide having desired glycosylation pattern suitable for therapeutic use in mammal. (MI) is useful for remodeling peptides chosen from immunoglobulin, erythroposetin, tisue-type activator peptide, etc. (MI) is useful for remodeling (a) G-GSF which is useful for treating acute myeloid leukemia (AML), non-myeloid cancer patient receiving bone marrow transplant, (b) factor VII for treating bleeding episode, factor VIII deficiency, factor IX deficiency, liver cirrhosis, (c) FSH for patients undergoing intrauterine insemination, in vitro fertilization and for infertile patient, (d) EPO for treating anemic patient baving chronic renal insufficiency and end stage remains acute myelogenous leukemia, (f) IFN-gamma for treating malignant osteoporosis, pulmonary fibrosis, tuberculosis, cryptococcal meningitis, etc. The glycopeptide produced using (MI) has specific customized or desired glycosylation pattern. (MI) allows efficient production of improved therapeutic moiety. The present sequence represents the amino acid sequence of a protein remodelled in the present invention

```
nedium and carrying a knockout genome gene encoding an enzyme which participates in a sugar chain modification, where fucose is linked by an alpha linkage at the l-position to the 6-position of N-acetylglucosamine to the reducing end of an N-glycoside-binding complex sugar chain. Also described are: a neutralization (MI) method of cell to the serum free medium; cloning, after making neutralizing cell to the serum free medium by (MI); a cell having a knocked out genome gene encoding the enzyme which is involved in the carbohydrate modification that is neutralized to the serum free medium; and a cloned cell strain, composition having a knocked out genome gene encoding the enzyme which is involved in the carbohydrate modification that is neutralized to the serum free medium.

(I) is useful for manufacturing a glycoprotein composition, which is unclease and in a culture medium and collecting the accumulated glycoprotein composition from the culture medium. The glycoprotein composition is useful in drug discovery and for treating immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 PGSSPKPWIYATSNLASGVPVRFSGSGGTSYSLTISRVEAEDAATYYCQQWTSNPPTFG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                     Domain deleted CC49 antibodies comprise a heavy chain human CC49 domain deleted sequence in which CH2 domain has been deleted and are reactive with tumour associated antigen (TAG)-72. The C2BB antibodies are reactive with CD20 and comprise a heavy chain having a sequence of a derived domain deleted C2BB construct where the CH2 domain has been deleted. Sequences of the invention are useful for imaging a neoplasm. They are also useful for treating myelosuppressed patients suffering from neoplastic disorder such as haematologic neoplasm, preferably non-Hodgkin's lymphoma. Antibodies of the invention are also used to treat neoplastic disorder, colon cancer and haematologic malignancy. They are useful for reducing tumour size, inhibiting tumour growth and/or useful for reducing the aurivial time of funour-bearing animals and for treating tumours. The present sequence is human C2BB light chain protein. This sequence is used in the exemplification of the invention
                                             Novel domain deleted CC49 antibody reactive with tumor associated antigen -72, or C2B8 antibody reactive with CD20, useful for treating myelosuppressed patient suffering from a neoplastic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PGSSPKPWIYGTSTLASGVPTRFSGSGSGTSYSLTISRVEAEDAATYYCQQWSSNPFTFG 120

(IDEC-) IDEC PHARM CORP

```
The invention relates to a dimeric antibody (1) comprising several monomeric subunits, where the monomeric subunits are non-covalently associated. (I) is useful for treating a disorder, especially immune disorder, and neoplastic disorder such as relapsed Hodgkin's disease, resistant Hodgkin's disease high grade, low grade and intermediate grade non-Hodgkin's lymphomas, B cell chronic lymphocytic leukemia (B-CLL), lymphoplasmacyroid lymphoma (LPL), mantle cell lymphoma (MCL), Gollicular lymphoma (FL), diffuse large cell lymphoma (DLCL), Burkitt's lymphoma, AIDS-related lymphoma, monocytic B cell lymphoma, angioimmunoblastic lymphodenopathy, small lymphocytic, follicular, diffuse large cell, diffuse small cleaved cell, large cell immunoblastic lympholastic lympholastic lymphomas, and non-Burkitt's, follicular, mixed small, non-cleaved, Burkitt's and non-Burkitt's, follicular, mixed small cleaved and large cell lymphomas, in a mammal (see ABZ24017 for a
                                                                                                                                                   neoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 PGSSPKPWIYATSNLASGVPVRFSGSGSGTSYSLTISRVEAEDAATYYCQQWTSNPPTFG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 PGSSPKPWIYGTSTLASGVPTRFSGSGGTSYSLTISRVBAEDAATYYCOOWSSNPFTFG 120

New non-naturally occurring single chain protein comprising polypeptides with bindaing domain, connecting regions and N-terminally truncated immunoglobulin, having immunological activity, useful for neutralizing infectious agent.

Disclosure; Page 383; 590pp; English

The invention relates to a non-naturally occurring single chain process.

(1) comprising a first polypeptide having a binding domain polypeptide capable of binding to a target molecule, the binding domain polypeptide capable of binding to a target molecule, the binding domain polypeptide capable of binding to a target molecule, the binding domain polypeptide capable of binding a connecting region, which comprises an amino acid substitution or deletion at one or more amino acid residues, as second polypeptide comprising a connecting region attached to the first protein is capable of an immunological activity. Also included are reducing a target cell population in a subject (involving administering to the subject a protein that is less than 150 kb, which involves treating the target cell population with a first protein or peptide that capable of at least one of binding an Foresing protein or peptide that capable of at least one of binding an Foresing protein or peptide molecule is directly connected to the second protein or peptide molecule is directly connected to the second protein or peptide molecule and the expectation or peptide molecule is directly connected to the second protein or peptide molecule are linked by a third protein or peptide molecule and the molecule are linked by a third protein or peptide molecule of the molecule are linked by a third protein or peptide molecule of the molecule are linked by a third protein or peptide molecule are linked by a protein or peptide molecule or reperior connected trunk, a cell containing the polypeptide, are combinant when the composition a cell containing the polypeptide, are recombinant well or manimal), a polymuclecide that encodes the polypeptide of the an animal, a cell containing the polypeptide, are recombinant well or expressing the polypeptide, are recombinant with a cell containing the polypeptide, are recombinant with one capable of expressing the polypeptide, are composition, a cell containing the polypeptide in comprisation comprising protein having (TN/CT) of caspase-3, caspase-8 or CD80. The fusion polypeptides are useful for neutralization of an infectious agent (where the infectious agent is a bacterium, a virus, a parasite, or a fungus) and also for treatment of cancer, immune disorders, Grave's disease, Hashimoto's disease, rheumatoid arthritis, systemic lupus erythematosus, Sjoegren's syndrome, thrombocytopenic purpura, multiple sclerosis and myasthenia gravis. The present sequence represents a fusion protein of the the invention relates to a non-naturally occurring single chain protein
